

LIGHTING & AUTOMATION

Take control of your whole house with a LightCraft Lifepad. Control one light or all the lights in your house from a single button. Get rid of all those controllers on your wall with a single Lifepad that will operate lights, your audio visual equipment, blinds, reticulation, anything you can imagine.

Tired of arriving home late at night stumbling through the house turning on lights so you can see where you're going? With a Lifepad and LightCraft lighting you can program a Welcome Home scene activated by a single press when you walk through the front door. Sick of going to bed only to discover a light has been left on somewhere in the house? Setup an All Off scene to simply turn off all the lights in your home without getting out of bed.

Lifepads can be configured to suit your needs as 2, 4 or 6 button controllers and are supplied with 3 faceplates and labeled buttons so that you can always remember what the buttons do. Feedback leds make it clear when a function is on or off and whenever you are adjusting a function.

Programming LightCraft is simple with an intuitive GUI that can scan your system and populate the devices connected to it. From there tell each device how you want it to perform, create triggers for scenes, even learn IR and enter serial codes for controlling a multitude of products.

A built in IR receiver makes operation of your HAL AV zone a breeze. With the standard HAL AV remote you can always tell when you are in control of your AV zone by the pink colour of the feedback LEDs. If you want to control your Lifepad from the comfort of your armchair there is the LightCraft Lighting Remote with AV functions to allow you to operate your system with ease.

LightCraft Controller

Available in black, white and stainless finish.

Control lighting channels - direct or create scenes and trigger them from Lifepad buttons.

LightCraft Dimmer/Relay

The modular approach to the system means the two channel modules can be conveniently located close to their loads or in various enclosures around the residence.

LightCraft Supervisor/RS232 Node

Introduce a third party control device or control devices with RS232 serial protocols.

LIGHTCRAFT AUTOMATION MODULES

Completing total control .

LightCraft Relay I/O

LightCraft Digital I/O

LightCraft IR-L
