KEY PAD CONTROL

SpeakerCraft Control System Rediscover the First Choice in Sound.

Introducing the SpeakerCraft sKP7, a 7-button, state-of-the-art keypad designed to allow simple control of the SpeakerCraft MRA-664 multi-room audio control system.

The SpeakerCraft sKP7 7-button keypad delivers a simple interface that enables the end user to select favorite sources, adjust volume and turn off the system—all at the touch of a button.

For SpeakerCraft MRA-664 users, the keypad provides simple preset access to preferred content on four channels, plus the ability to raise and lower the volume and power down a zone or the system. The keypad features custom engraveable interchangeable buttons, one of which is a "rocker" style action that delivers volume up and down adjustment control while the other five buttons are single action.

This next-gen keypad is simple to use, easy to navigate with the backlit pad, and the decor style of the keypad allows it to be placed in multiple gang decora plate applications with lighting and intercom systems.

sKP7
